

SEEREM

SEE REMOTELY

A new way to see work sites

INTRODUCTION

In light of recent circumstances, there is a need for digital solutions providing access to information.

SeeRem technology is designed to improve work sites visibility in a quick, inexpensive, and real-time manner.

PROBLEM

Social distancing and travel restrictions are impacting business operations around the world.

SeeRem enables the use of existing smart devices in remote areas to visually connect professional staff to work sites at the time they need it most.

Essentially, this is achieved by locating devices, identifying their users, and connecting via company approved communication channels.
